Summary

MS Computer Science student at NYU Tandon graduating May 2027 with experience in full-stack applications, open-source Python tooling, and database-backed systems. Contributed two merged pull requests to a production Python CLI and built applications with Python, Flask, PostgreSQL, JavaScript, and React.

Education

New York University, Tandon School of Engineering — May 2027
Masters of Science in Computer Science
Relevant Coursework: Design & Analysis of Algorithms, Machine Learning

SRM Institute of Science and Technology — Jun 2025
B.Tech. in Computer Science and Engineering — CGPA: 9.38/10
Relevant Coursework: Artificial Intelligence, Formal Language and Automata, Data Mining and Analytics

Research

Explainable Fake News Detection with Source Credibility and Decision Transparency — Jul 2025
2nd International Conference on Computing and Data Science (ICCDS 2025), IEEE Xplore
Advisor: Dr. Srinarayani K

- Developed a credibility-aware CNN/LSTM/BiLSTM ensemble achieving **95.2% accuracy**; improved reliability to **97.1%** with SHAP explanations and source validation across **600K+ articles**. DOI: 10.1109/ICCDS64403.2025.11209129

Projects

Snickr - Collaboration Web Application | GitHub — May 2026
Python, Flask, PostgreSQL, Jinja2, Bootstrap

- Built a Slack-like application with authentication, workspaces, public and private channels, direct messaging, invitations, message search, and profile management.
- Added **14 pytest tests**, Python 3.10–3.12 GitHub Actions CI, and a non-root Docker deployment with PostgreSQL Compose; implemented parameterized SQL, password hashing, and route-level access control.

NYC Traffic Collision Dashboard | GitHub — Feb 2026
Python, Pandas, Plotly, Dash, NYC Open Data

- Built an interactive analytics application for **82K+ collision records** with coordinated filters, KPI cards, geospatial hotspots, contributing-factor analysis, and monthly trends.
- Created a reproducible data-cleaning pipeline and responsive Dash callbacks to transform raw public data into explorable views.

Decentralized Freelance Escrow | GitHub — May 2026
Solidity, React, Node.js, Hardhat, ethers.js, Ethereum Sepolia

- Developed a full-stack escrow DApp supporting buyer, seller, and arbiter workflows for deposits, work approval, disputes, payment release, and refunds.
- Deployed the Solidity contract to Sepolia and integrated MetaMask and ethers.js with a React interface for on-chain transactions and state retrieval.

Experience

Volunteer Contributor – NYU Secure Systems Lab / Darnit — Mar 2026 – Jul 2026

- Contributed **2 merged pull requests** to an open-source Python CLI, fixing Claude Code and Claude Desktop MCP installation path handling and improving related documentation.
- Added pytest coverage for subprocess timeout handling and repository detection edge cases to improve CLI reliability.

Technical Leader - Synergy RMP (Student Technical Club) — Apr 2023 – Jun 2025

- Coordinated and supervised large-scale student events, ensuring adherence to schedules, organized operations, and smooth execution in high-pressure environments.
- Directed student teams in managing technical logistics and event delivery while mentoring junior members in AI-focused initiatives and emerging technologies.

Technical Skills

Programming Languages: Python, JavaScript, C++, C, SQL, HTML, CSS, Solidity
Libraries & Frameworks: Flask, React.js, Node.js, pytest, Jinja2, Bootstrap, Pandas, Plotly, Dash, Streamlit
Databases & Tools: PostgreSQL, MySQL, MongoDB, Git, Docker, GitHub Actions, Hardhat, ethers.js

Certifications

- Neural Networks and Deep Learning — Certificate
- Machine Learning A-Z — Certificate
